

HPM è la serie di filtri per linee in pressione fino a 42.000.000 Pa (420bar-6000Psi); la gamma è composta da tre differenti grandezze con portate nominali fino a 400L/min, ed attacchi filettati o flangiati. Gli elementi filtranti sono costruiti con i più evoluti materiali, a garanzia di una elevata efficienza di filtrazione e della massima durata nel tempo.

La concezione di costruzione modulare, propria della serie HPM, permette al cliente OMT Group di poter sceglierne la configurazione più adatta alla propria necessità.

*HPM is the high pressure filter up to 42.000.000 Pa (420 bar-6000 Psi); the range is composed by 3 different sizes with nominal flow rates up to 400 l/min., available with threaded or flanged connections. Filter elements are made with the most advanced materials, as a guarantee for an high filtration efficiency and a long-lasting life.*

*HPM series modular construction allows the customer to choose the most suitable type following his needs.*

La caduta di pressione completa si ottiene sommando la caduta di pressione del corpo filtro e quella dell'elemento filtrante.

#### Cadute di pressione nel corpo filtro

Le curve sono valide con olio minerale avente massa volumica di 860 Kg/m<sup>3</sup>.

La caduta di pressione è proporzionale alla massa volumica.

#### Cadute di pressione negli elementi filtranti

Le curve sono valide con olio minerale avente viscosità cinematica di 30 cSt.

La variazione di caduta di pressione è proporzionale alla viscosità cinematica.

The pressure drop of the complete filter is calculated by adding the pressure drop of the housing to that of the filter element.

#### Pressure drops in the housings

The graphics refer to use of mineral oil with a mass density of 860 Kg/m<sup>3</sup>.

The pressure drop is proportional to the variations of mass density.

#### Pressure drops in the filter elements

The graphics refer to mineral oil with a kinematic viscosity of 30 cSt. The variation of the pressure drop is proportional to viscosity.
